

Easy pair

(low hardness)

Example:

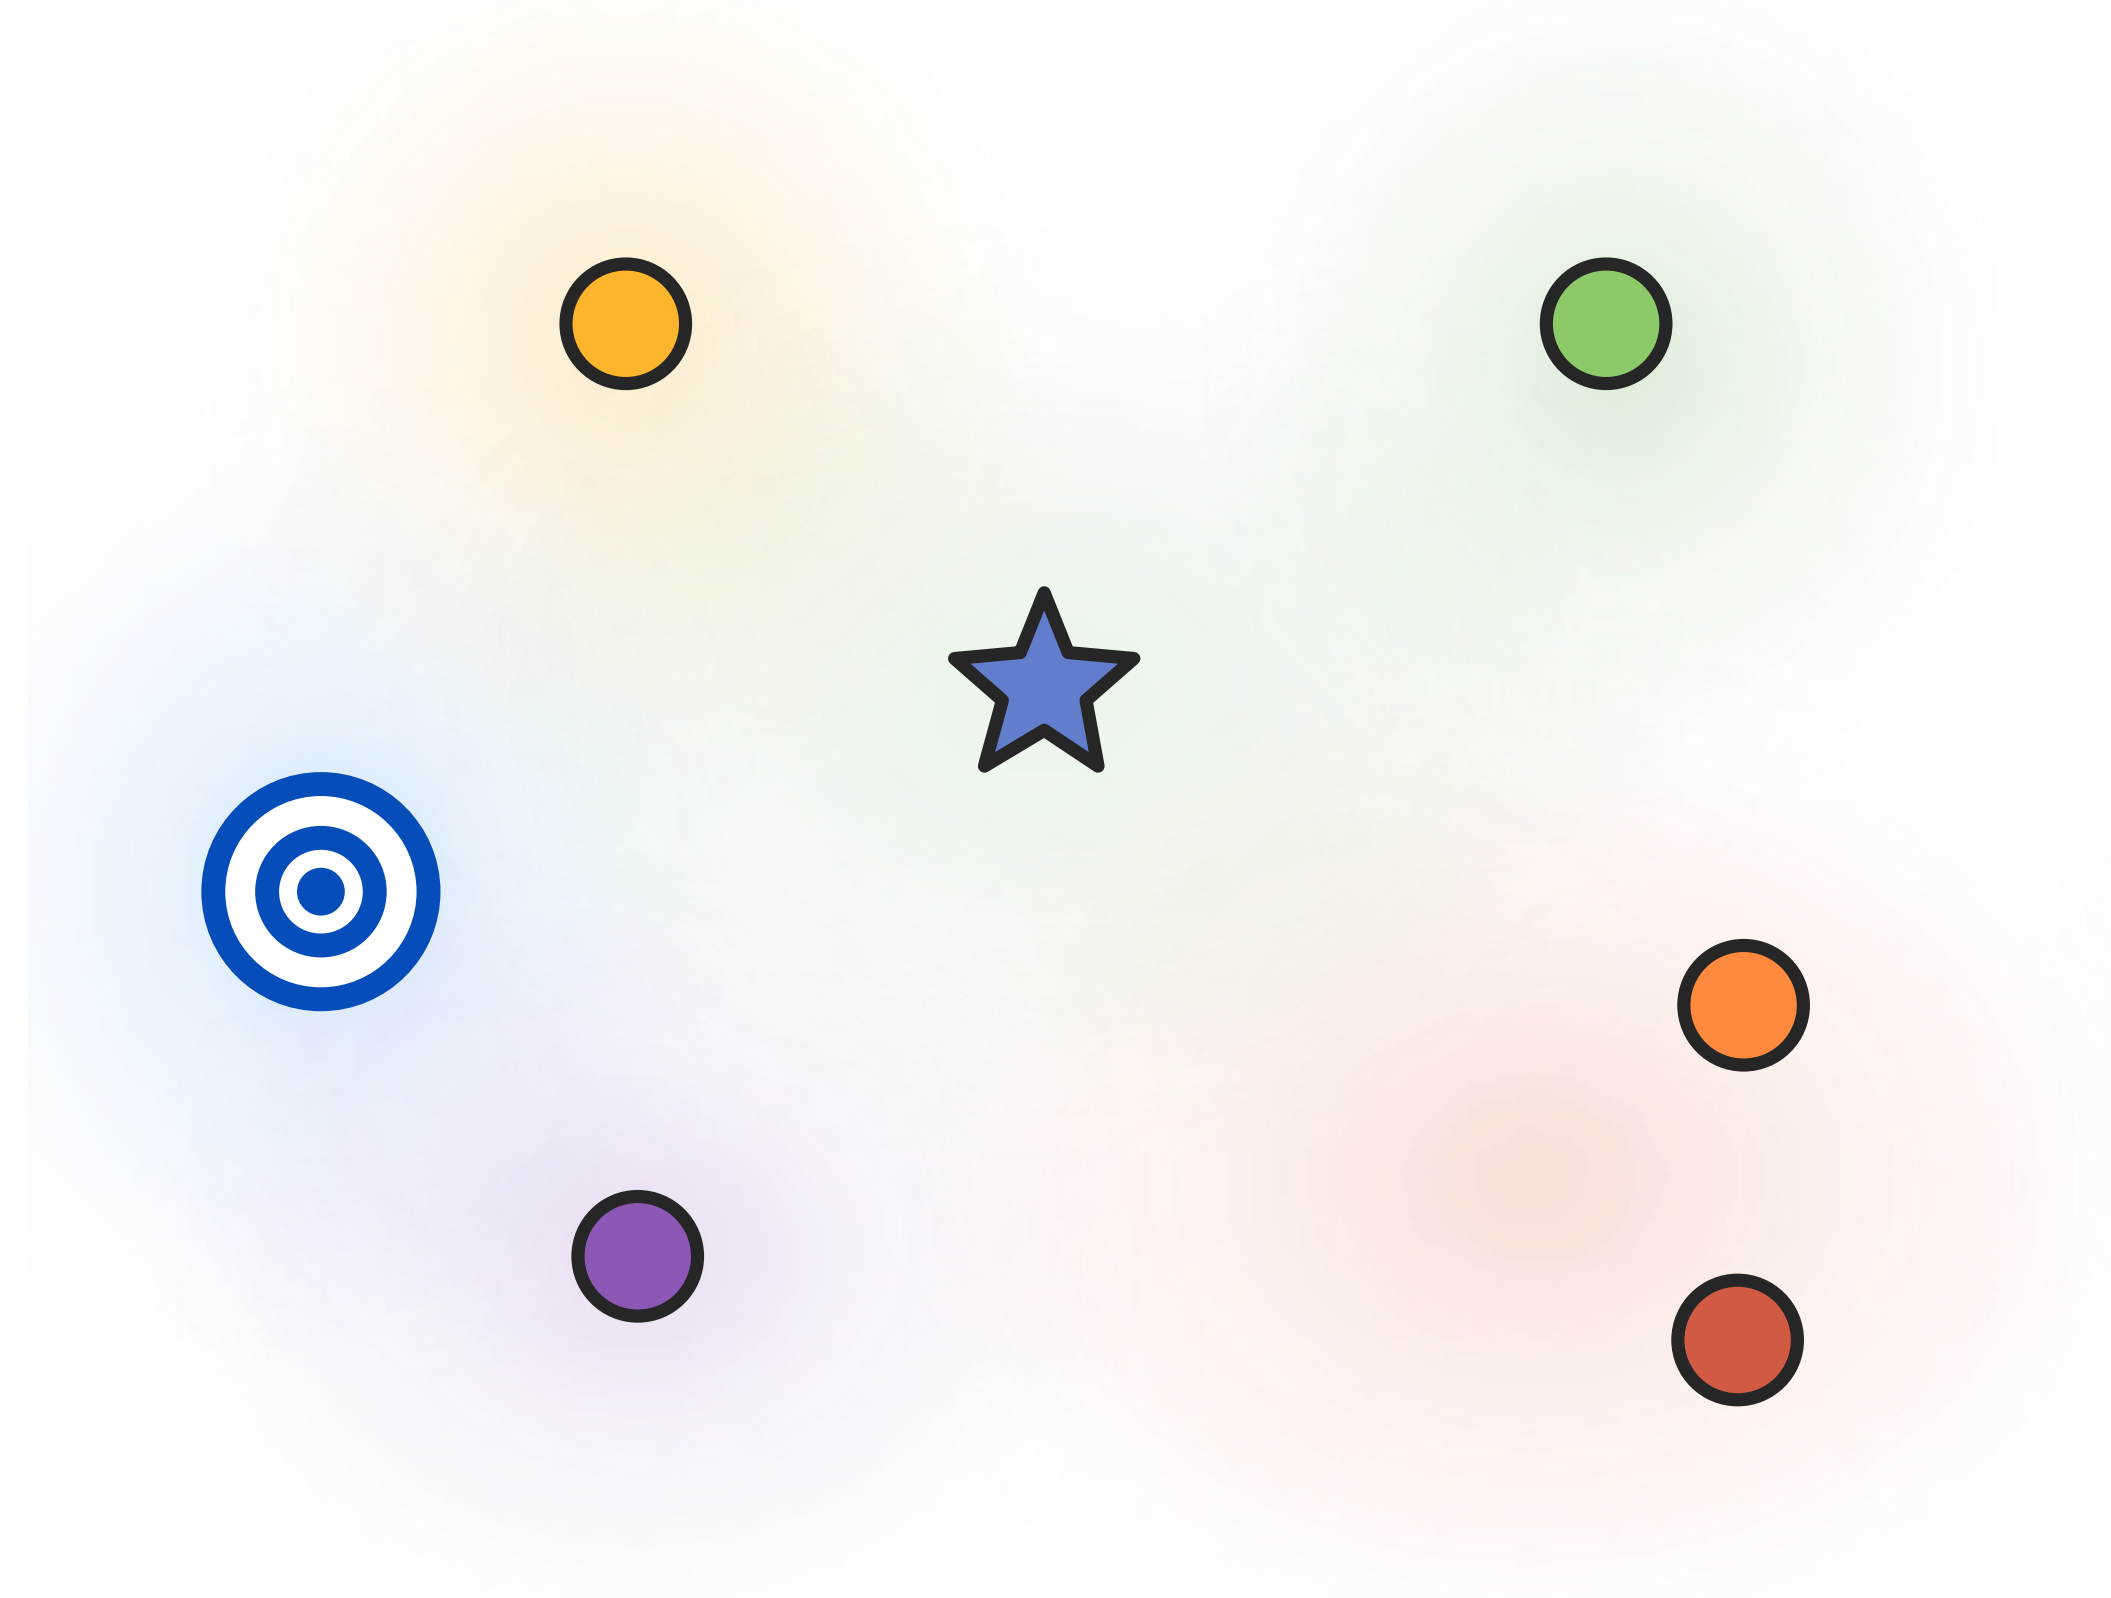

$s = \text{neutral}$

$t = \text{happy}$

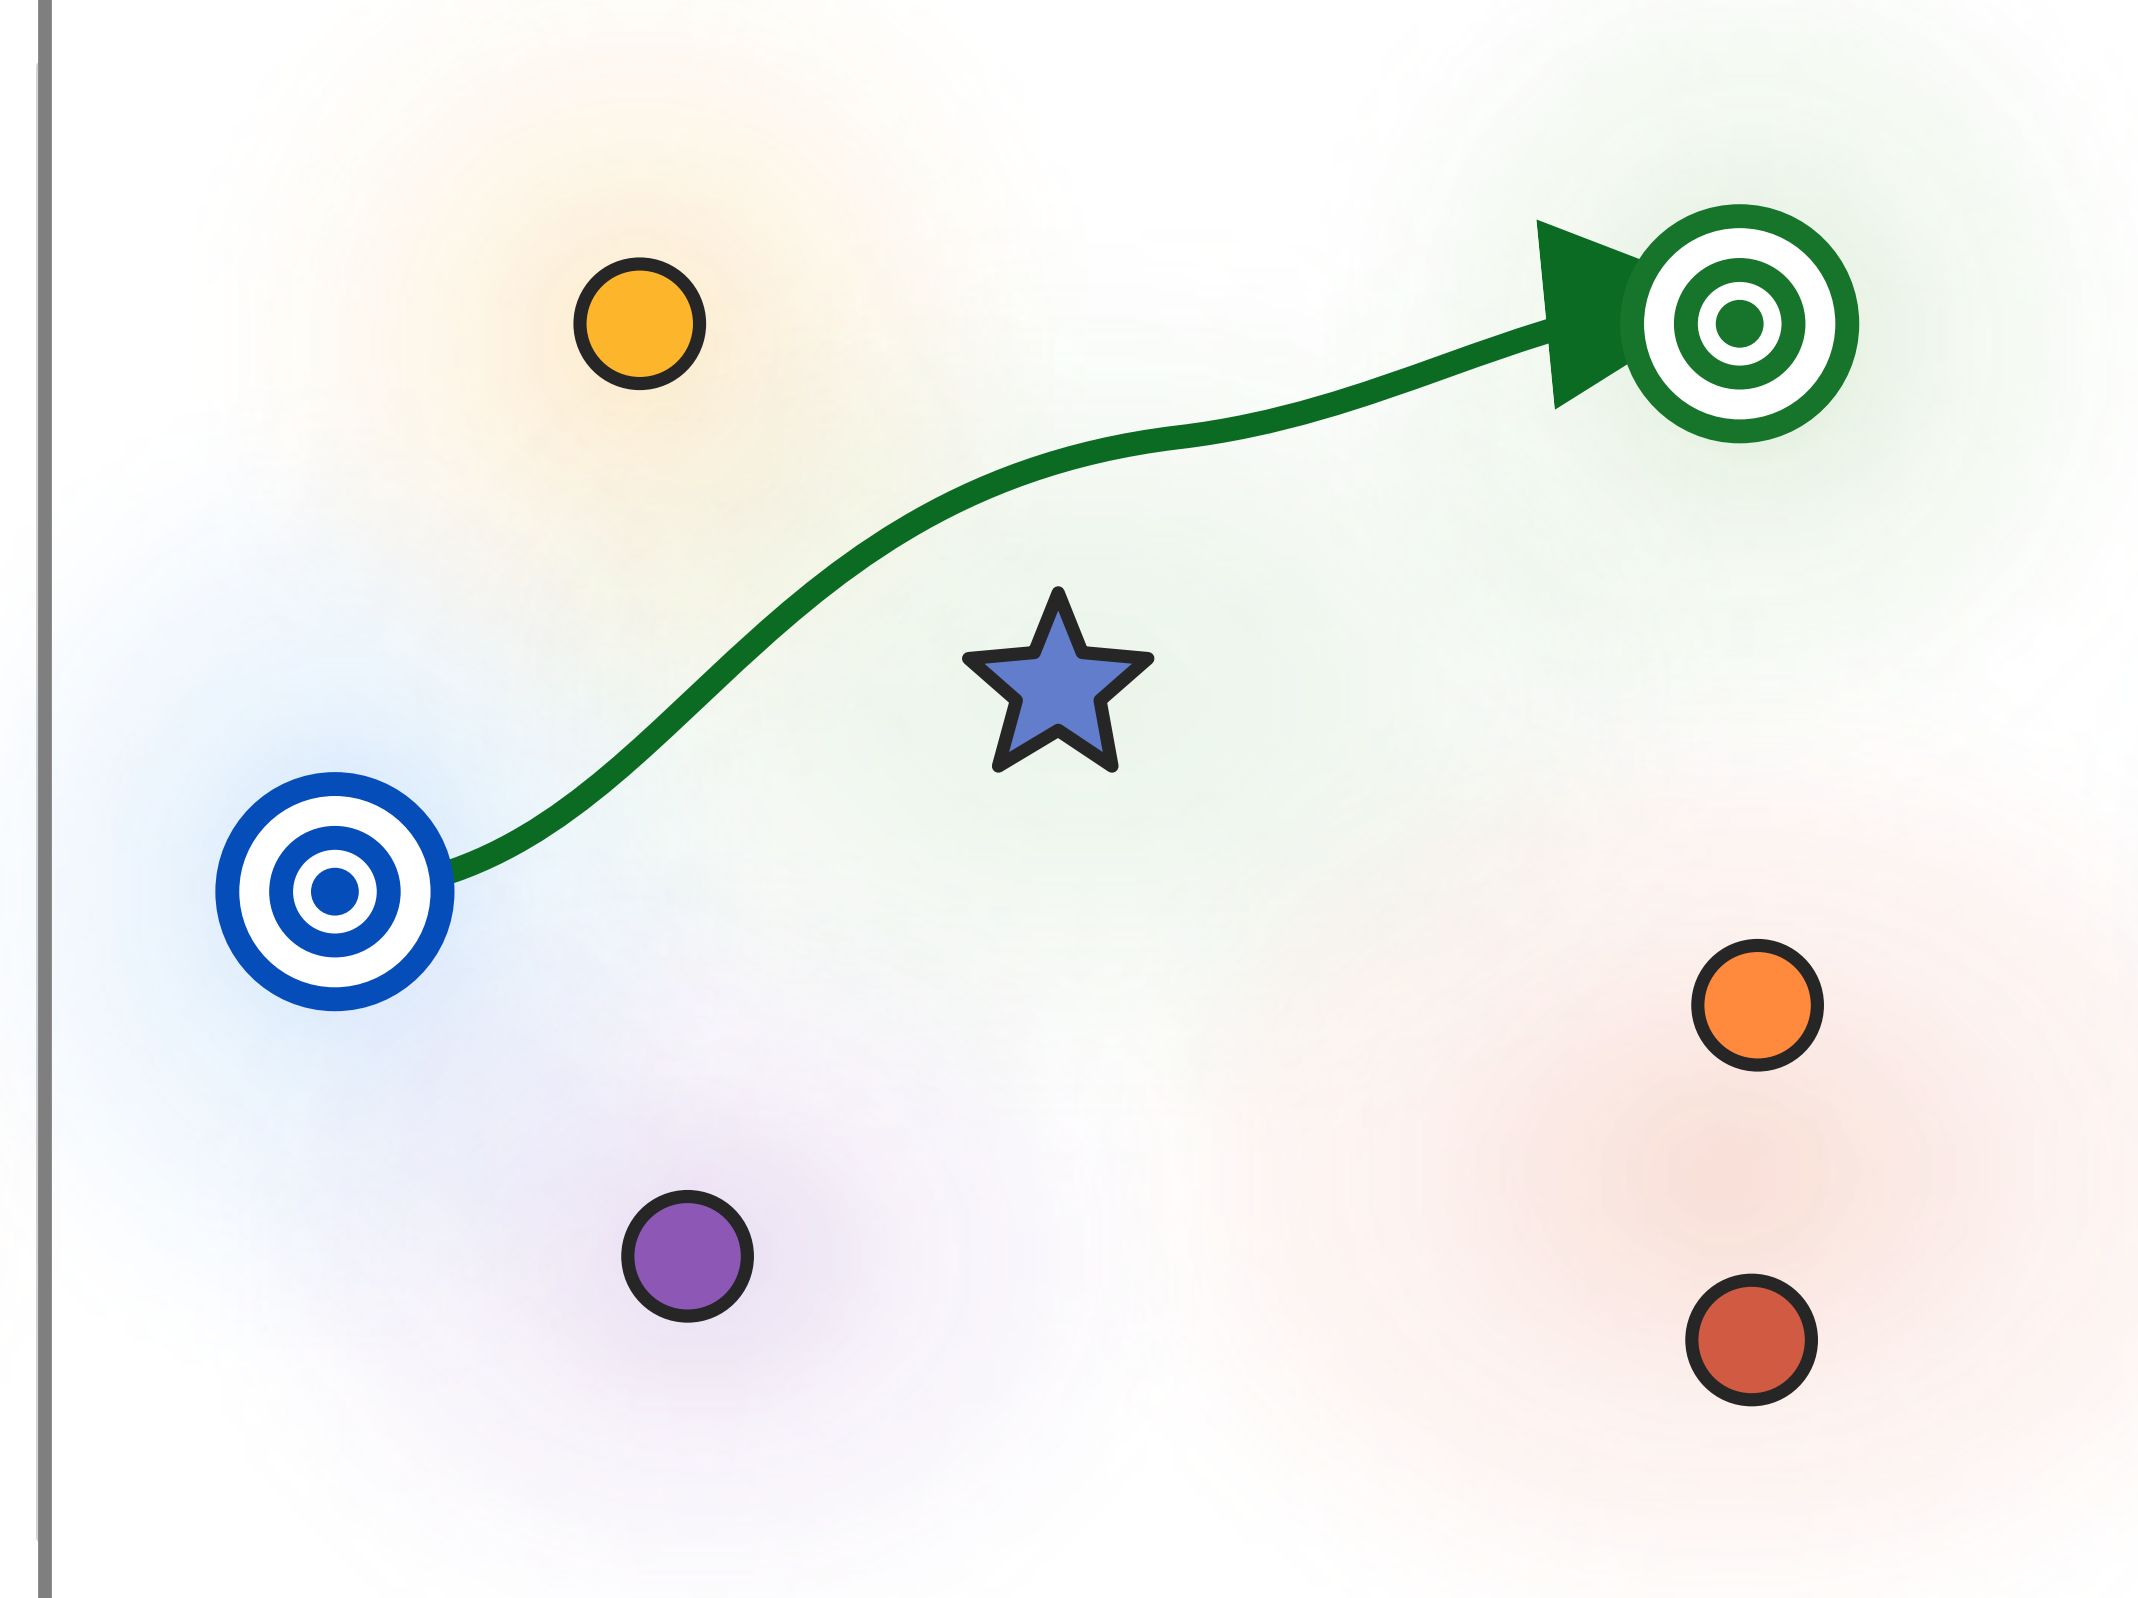

Hardness $H_m(s, t)$

Low

1) Start at source e_s

2) Direct low-cost path

3) Reach target e_t

- ✓ High similarity
- ✓ Weak barriers
- ✓ Direct route feasible

Low cost

High pair

(high hardness)

Example:

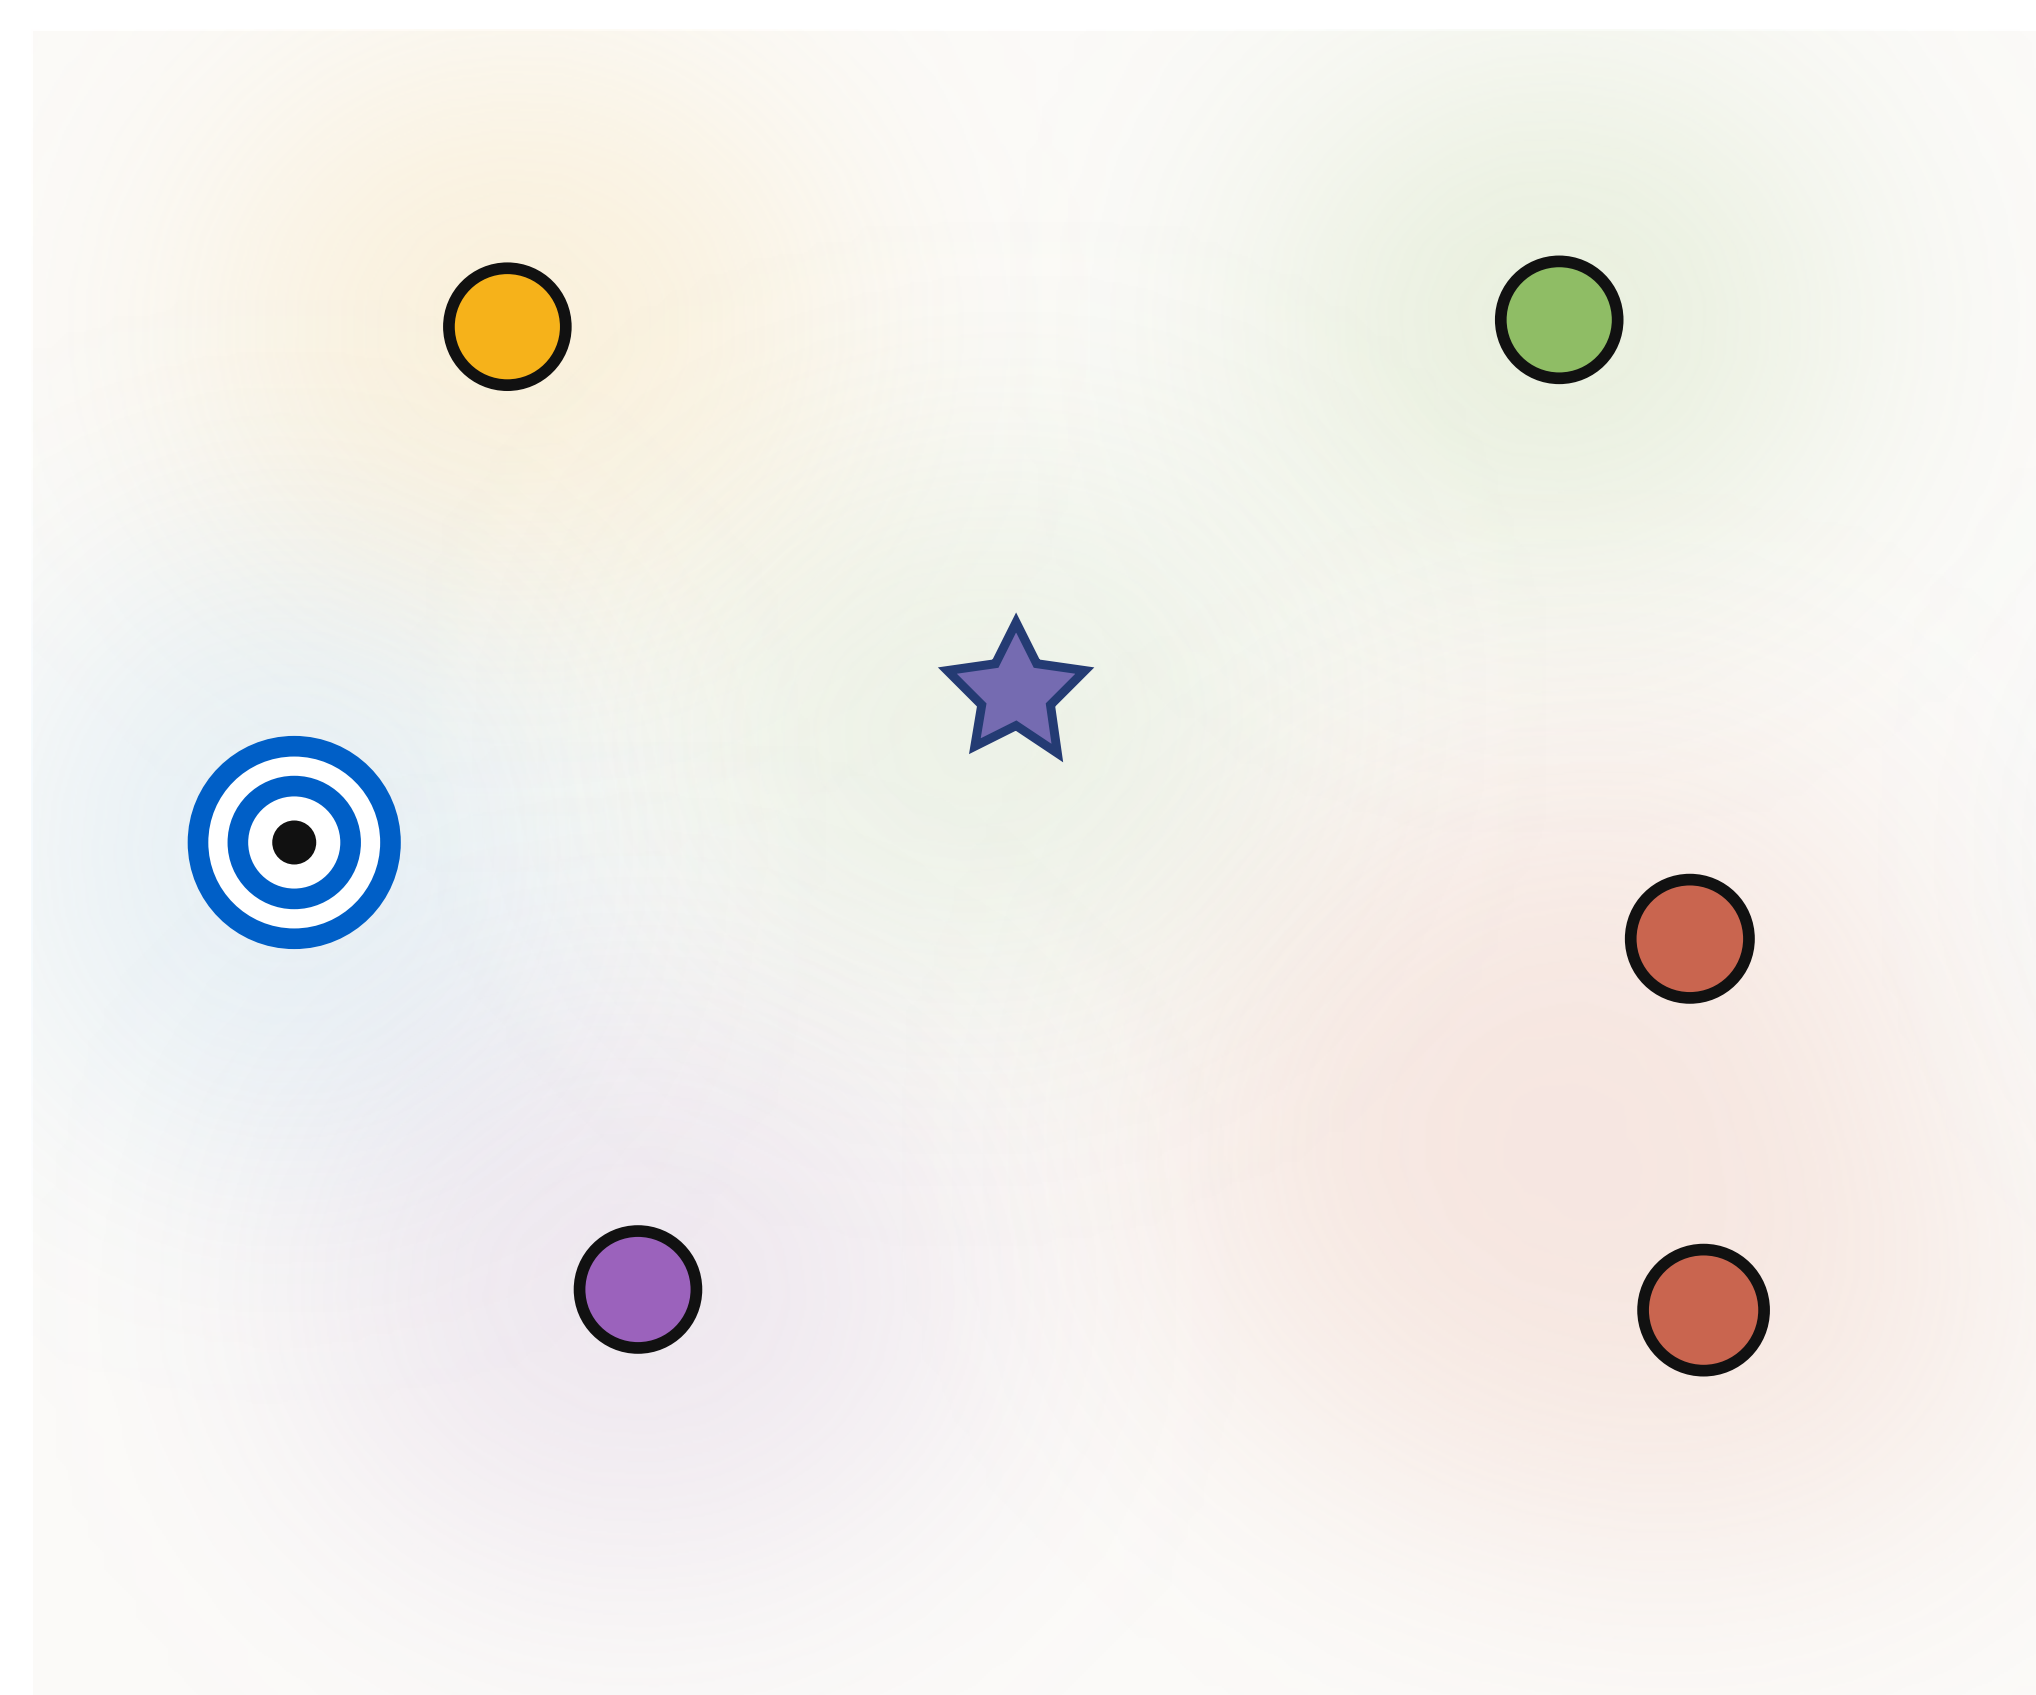

$s = \text{sad}$

$t = \text{happy}$

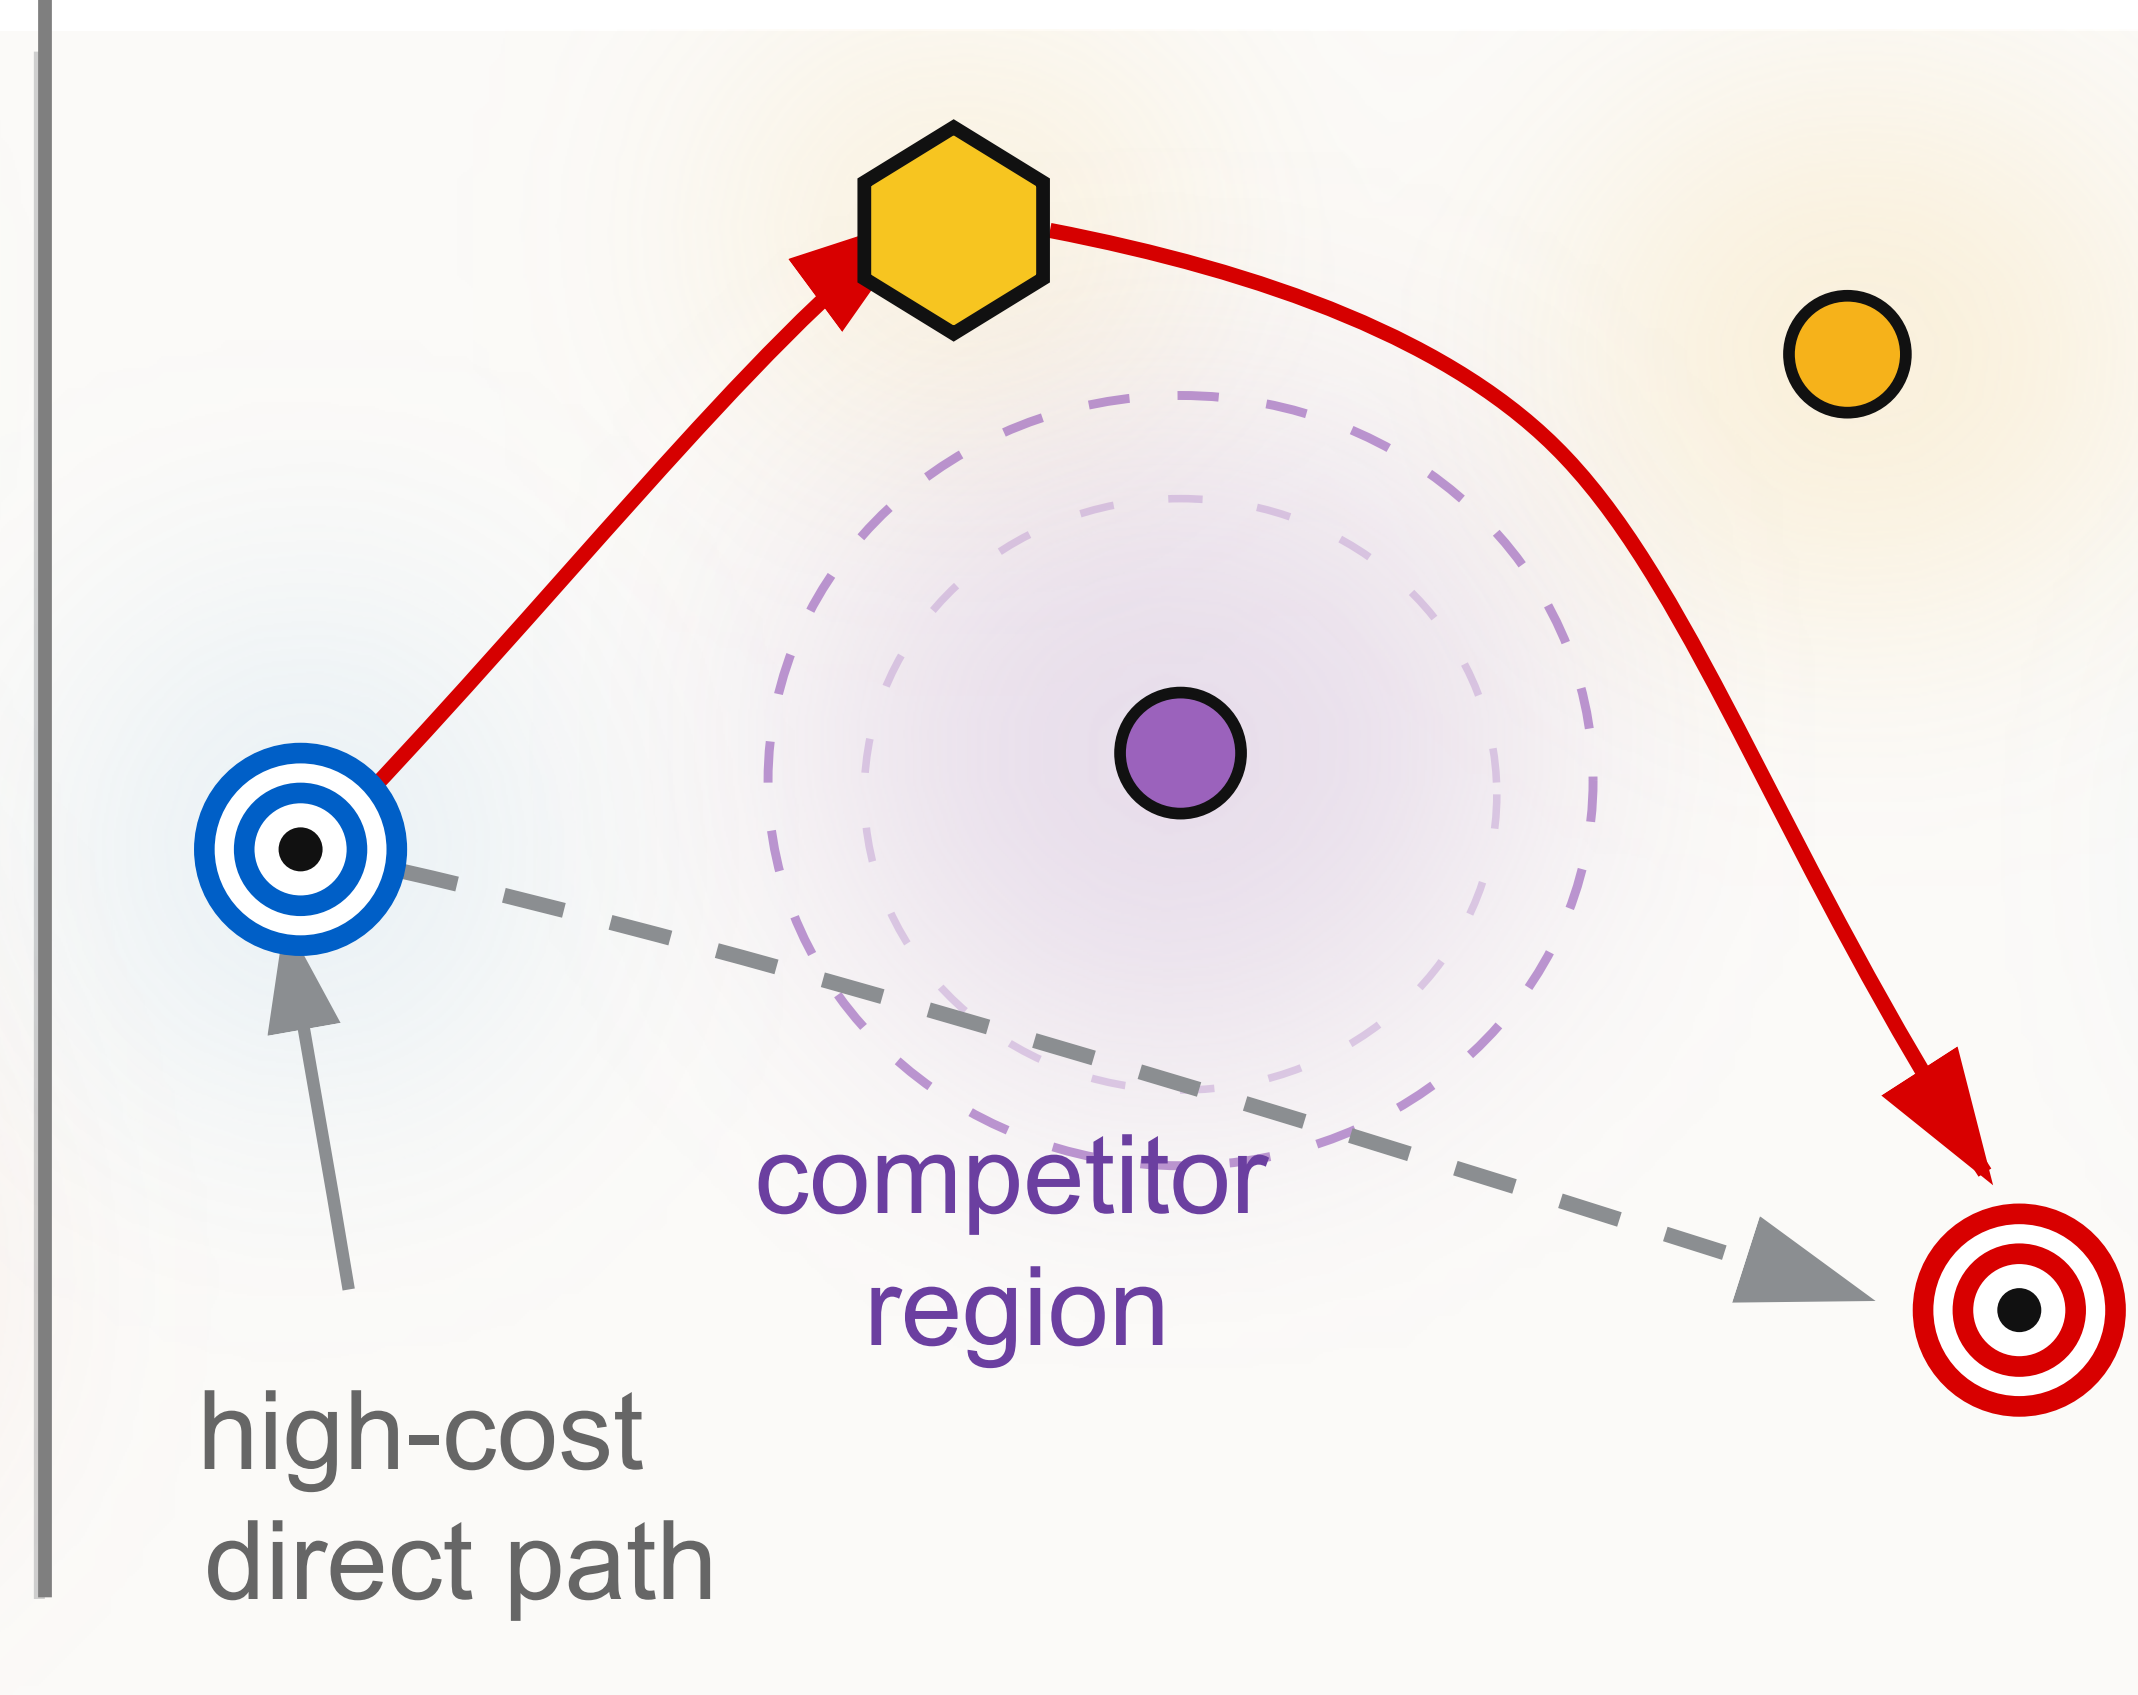

Hardness $H_m(s, t)$

High

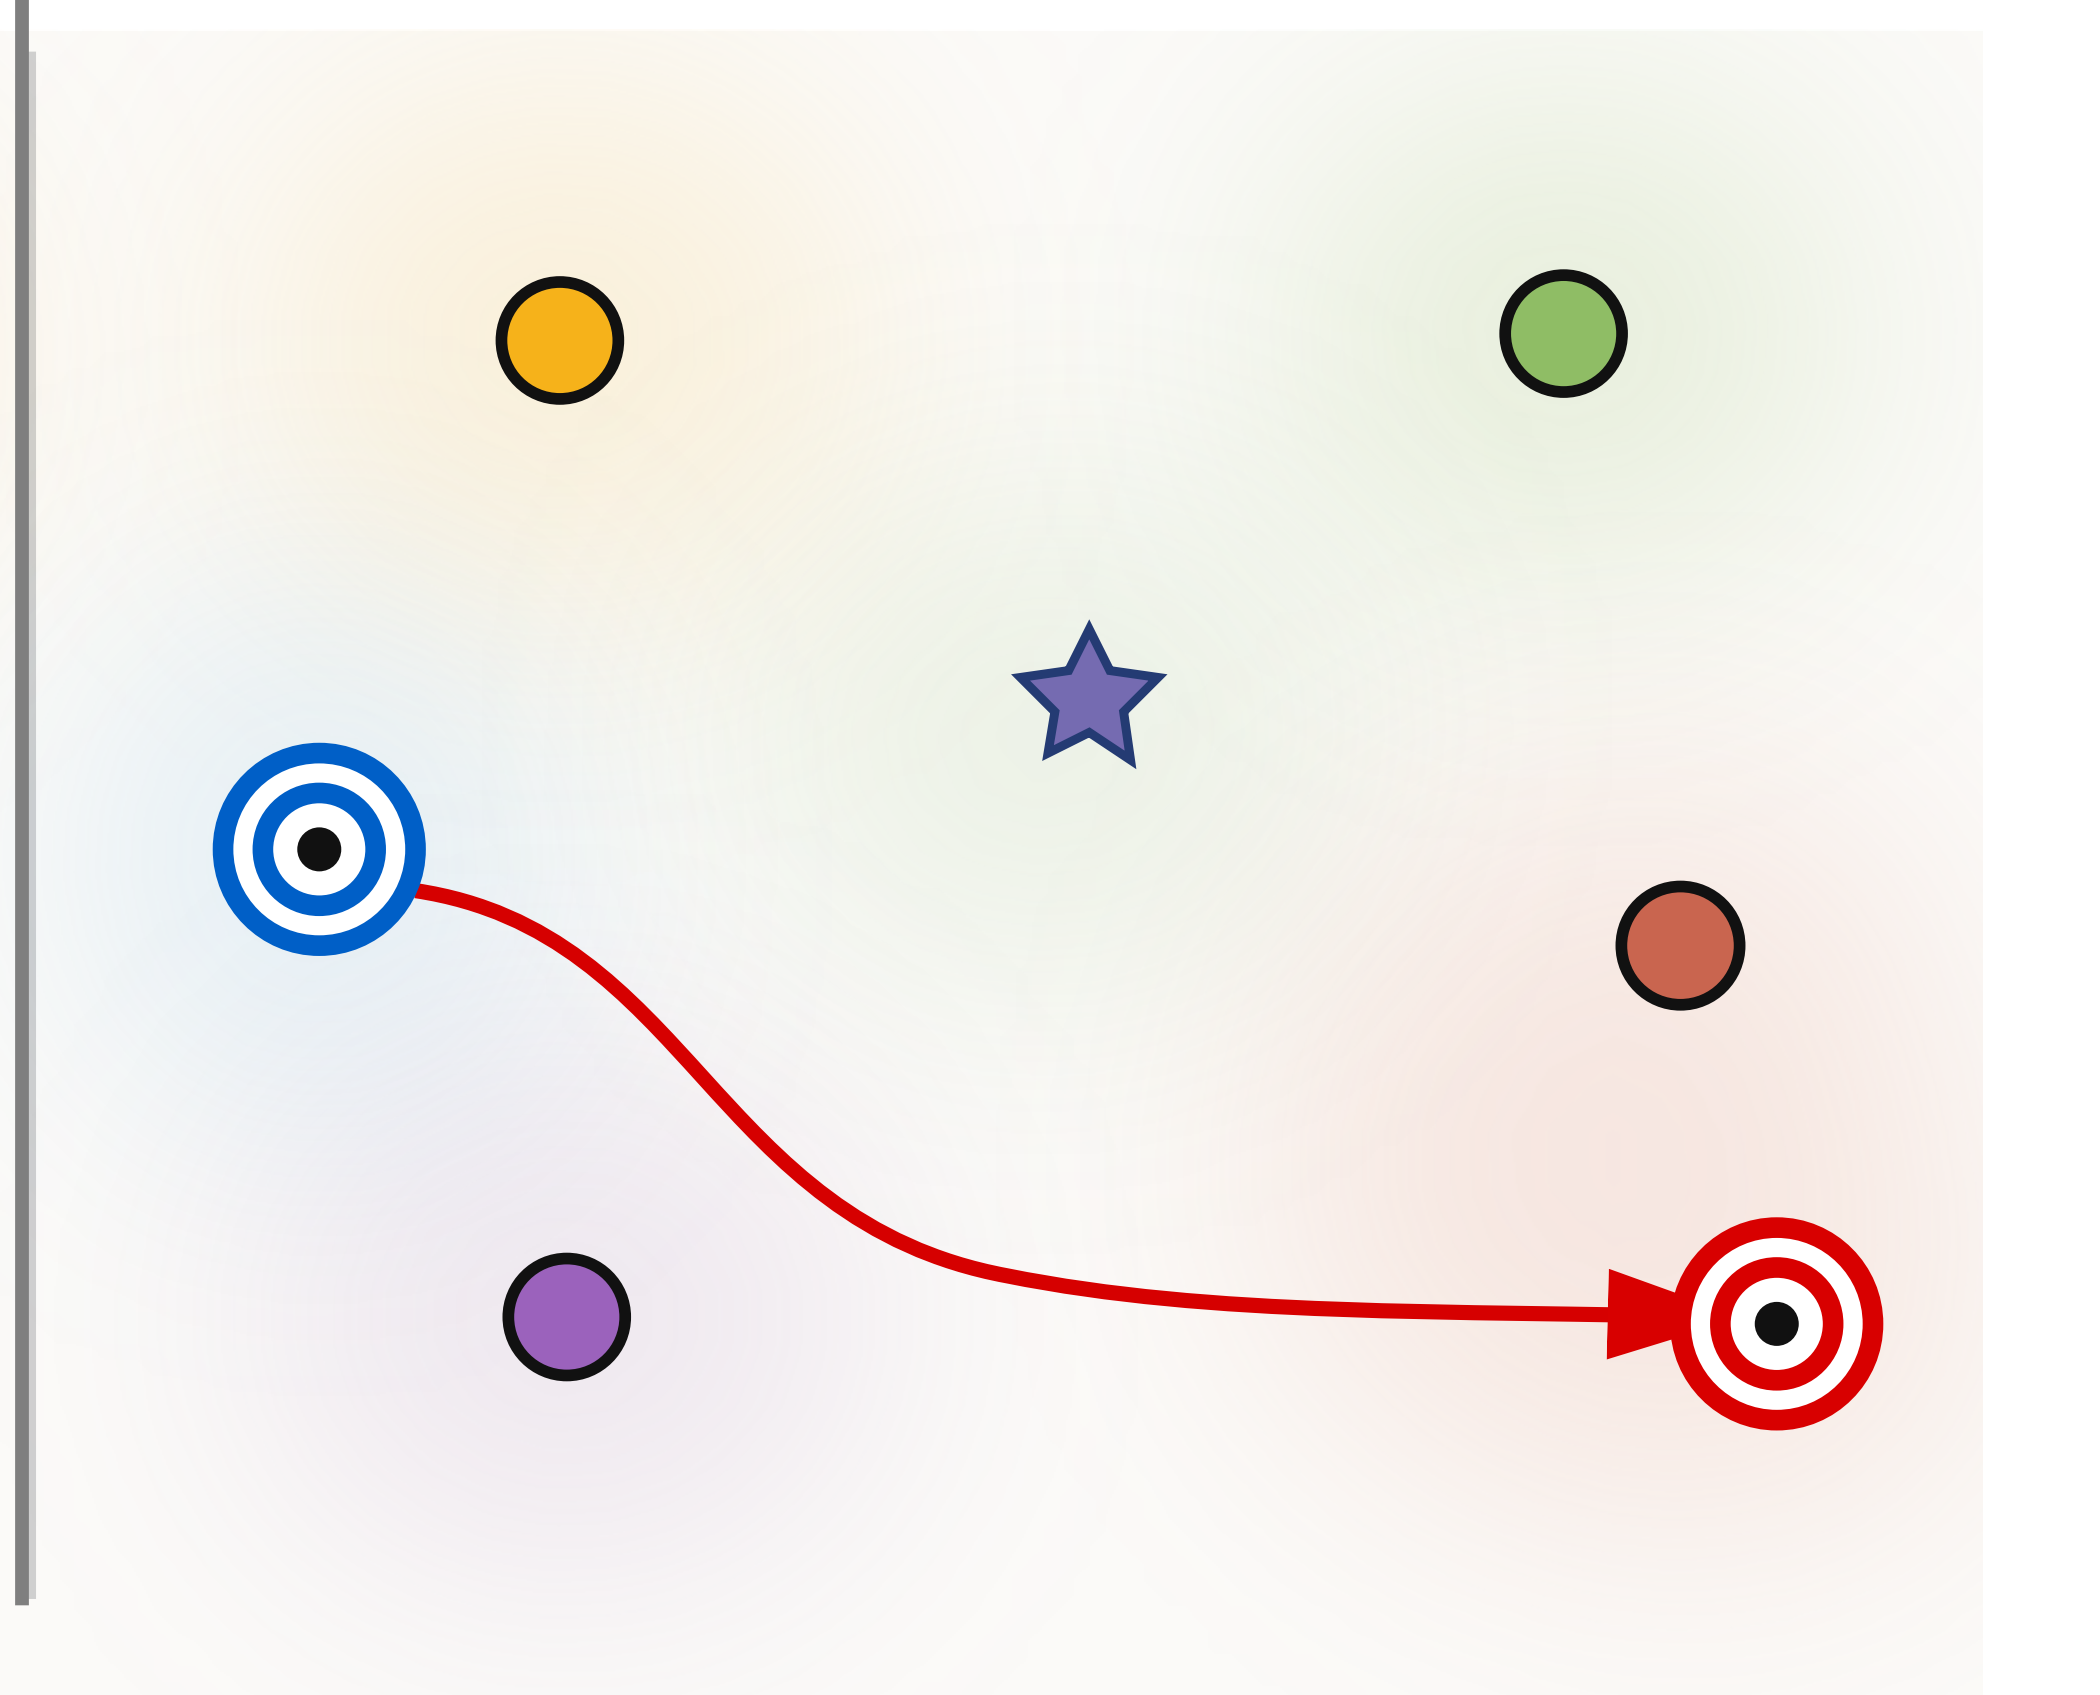

1) Start at source e_s

2) Use waypoint to avoid barrier

3) Reach target e_t

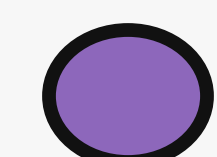

- ✗ Dissimilar emotions
- ✗ Strong competitor
- ✗ Direct route blocked

High cost
